FLAME RETARDANT/ FIRE RESISTENT

Flame Retardant:

The CableSafe Dropped Objects Prevention Work Mat is available with flame retardant coated polyester fabric. This flame retardant fabric is constructed of coated polyester mesh fabric.

This mesh is very strong and has a tear strength of 330N (DIN53363).

The flame retardant work mats are available with spanners or with magnets.

Fire Resistant:

The CableSafe Dropped Objects Prevention Work Mat is available with fire resistant material which is made of fibreglass double coated polyurethane.

It can withstand temperatures of up to 550°C.

The fire resistant mats are available with spanners or with magnets.

Fire Resistant

Flame Retardant

SOCIAL RETURN

Social return is an important aspect for CableSafe. This is how the production of our Dropped Objects Prevention Work Mat is done as much as possible in sheltered workshops and prisons. These places are mainly staffed by skilled professionals with a disability or distance from the labor market.

We want to give people with a distance to the labor market a chance to reintegrate into our society, and upgrade them in a creative way. This gives an ex-prisoner a higher chance of reintegration and a smaller chance of recidivism.
