- 9 inch which holds 55 kg static load
- 12 inch which holds 190 kg static load
- 15 inch which holds 265 kg static load

HOW NOT TO DO IT!

FAQ

We get a lot of questions regarding our products. Here you can read more about our most popular product, the Safety Hook and its differences between other hooks.

What is Safety Hook?

When one thinks of a safety hook, a lot of things come to mind such as Gunnebo hooks, rescue hooks or pool safety hooks. Our Safety Hooks on the other hand allow for a much tidier work area, as the cables, hoses or other work gears are organized in an orderly fashion and tucked safely out of the way. They are of high quality, made with special blend raw material from glass reinforced polyester.

What is a Rescue Hook used for?

Rescue hooks generally refer to electrical rescue hooks, pool hooks and hooks to retrieve someone from a manhole. Electrical safety rescue hooks or electrical shepherd hooks are used when pulling a shock victim away from an electrical source to protect the retriever from getting shocked.

What are Cable Hooks?

Cable hooks are used to suspend, retain and support all sorts of cables, namely: electrical cables, welding cables, hoses, extension cords and much more. We as CableSafe are a pioneer in the field of cable safety and cable management. Our hooks can be used during maintenance, turnaround, outages, shutdowns, construction work to suspend cables and hoses and other work gear from the workflow. This allows for safer passage and prevents slips, trips and falls.
